CLEAN GUTTER AND BIRDPROOFING SYSTEM

WHAT IS IT?

There's nothing worse than spending what should be a lazy Sunday afternoon, cleaning gutters. With The Great Barrier Leaf, there's no such thing.

The Great Barrier Leaf is an effective leaf guard and bird proofing system that allows water to flow freely into the gutters. And forget about the leaves, the natural elements of wind and rain can be left to do that.

Folding line

HOW DOES IT WORK?

Firstly, it's made from high-density polyethylene. To most of us that doesn't mean a thing, but to the guys at The Great Barrier Leaf it means long lasting and installation flexibility. The arched profile provides positive fixing into the gutter bead and back corner of the gutter. No gaps remain as bars are pressed firmly between the drainage slots and the profiled roof edge.

Because of the way it's made, The Great Barrier Leaf can fit into almost any existing gutter. Whether it be tiles (terracotta or cement) slate, or colorbond. The Great Barrier Leaf reduces leaf entry by up to 99%. Unlike most gutter protectors GBL can easily be removed for cleaning of silt if required.

HOW DO I INSTALL IT?

There are two options for installation. If you choose, it can be a DIY job, or if you prefer, one of our qualified installers can pay you a visit and custom fit the leaf guard to suit your roof and spouting.

What's the life expectancy of The Great Barrier Leaf?

Fitted correctly, The Great Barrier Leaf has a life expectancy of around 20 years. We also offer a 10 year product guarantee and a customer satisfaction guarantee of up to 12 months.

Just think about how many hours of maintenance you could save with The Great Barrier Leaf.
